Campusmonk

>> Arrays

- Maximum Subarray Sum (Kadane) — also print indices.
- Subarray with Given Sum (handles negatives) — hashmap prefix-sum.
- Sliding Window Maximum — deque.
- Minimum Number of Swaps to Sort an Array — cycle decomposition.
- Product of Array Except Self (no division) — prefix/suffix.
- Merge Intervals / Insert Interval — sorting + merge.
- Next Permutation — in-place algorithm.
- Find Median of Two Sorted Arrays (hard) — binary search.
- Rearrange Array Alternate Positive & Negative — in-place partitioning.
- Maximum Product Subarray — handle negatives carefully.

Campusmonk

>> Strings

- Longest Palindromic Substring — find max-length palindrome.
- Longest Common Subsequence (LCS) — classic DP on strings.
- Smallest Window Containing All Characters of Pattern — two-pointer + hashmap.
- Minimum Insertions to Make a String Palindrome — DP (or LCS trick).
- Word Break (dictionary) — DP / Trie.
- Count and Print All Anagram Indices — sliding window + freq.
- Longest Substring Without Repeating Characters — sliding window.
- Zigzag String Conversion / Minimum swaps to group same characters.

Campusmonk

>> Dynamic Programming

- Coin Change — minimum coins (unbounded).
- 0/1 Knapsack — classic DP.
- Longest Increasing Subsequence (LIS) — DP / patience sorting (binary search).
- Edit Distance (Levenshtein) — DP on strings.
- Count Ways to Reach Nth Stair (with constraints) — DP.
- Matrix Chain Multiplication — DP on intervals.
- Partition Equal Subset Sum — subset-sum DP.

>> Trees / Binary Trees

- Lowest Common Ancestor (binary tree) — single pass recursion.
- Serialize and Deserialize Binary Tree — BFS/DFS formats.
- Diameter of Binary Tree — post-order DP.
- Convert Sorted Array to BST / Balanced BST — recursion.
- Binary Tree Vertical Order Traversal — BFS + column map.

Comment "Infosys" for the PDF

>> Math / Number Theory

- Count Primes up to N (Sieve of Eratosthenes).
- Greatest Common Divisor (extended) & LCM problems.
- Power of Large Exponent Modulo (fast pow) — modular exponentiation.
- Find Smallest Missing Positive Integer — O(N) in-place.

>> Greedy & Heap

- Assign Cookies / Activity Selection — greedy interval selection.
- Merge K Sorted Lists / Arrays — min-heap.
- Sliding Window Median — two heaps.

Campusmonk

>> Bit Manipulation / Advanced

- Single Number (all others twice) — XOR trick.
- Count Subsets with Given XOR / Bit DP problems.
- Maximum XOR of Two Numbers in Array — trie of bits.

>> Backtracking / Combinatorics

- N-Queens — backtracking with pruning.
- Subsets / Power Set generation — recursive & iterative.
- Combination Sum (unique combinations) — backtracking + sorting.

Campusmonk

> Misc / System Design-ish

- LRU Cache implementation — O(1) ops via hashmap + doubly linked list.
- Design Phone Directory / Parking lot small system (object design + functions).

New Sankalp 7.0 Batch Exclusive for 2026/25 Passing Batch (TCS & Other)+ Certificate
